Alter table people, add email

The screenshot shows a web application interface for a movie database. The 'People' section is active, displaying a list of actors with 'ADD', 'EDIT', and 'DELETE' links. Below the list, a MySQL command line client window is open, showing the execution of a query to add an email column to the 'people' table. The query is: `ALTER TABLE people ADD COLUMN (email VARCHAR(255) NOT NULL);`. The output shows the table structure and the successful execution of the query.

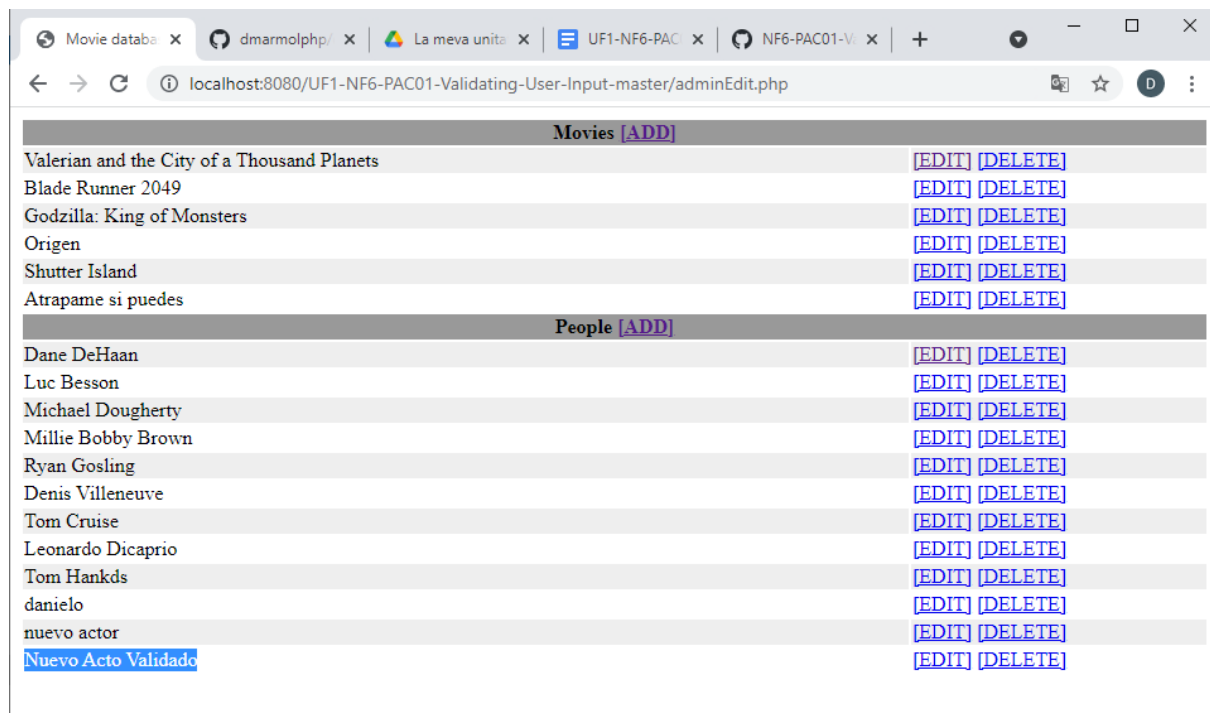

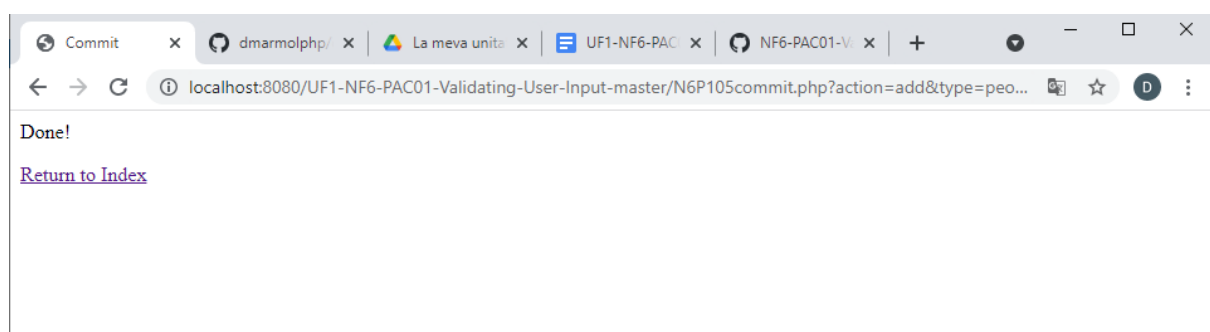

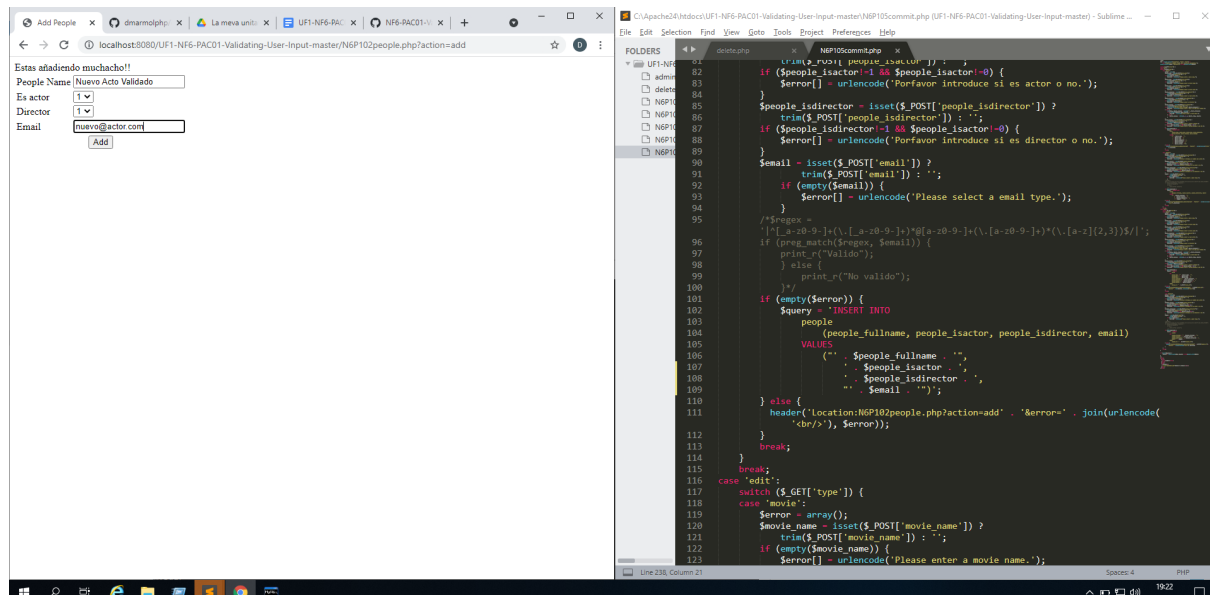

people_id	people_fullname	people_isactor	people_isdirector	email
1	Dane DeHaan	1	0	
2	Luc Besson	0	1	
3	Michael Dougherty	1	0	
4	Millie Bobby Brown	1	0	
5	Ryan Gosling	1	0	
6	Denis Villeneuve	1	0	
7	Tom Cruise	1	0	
8	Leonardo DiCaprio	0	1	
9	Tom Hanks	0	1	
12	danielo	1	0	

Añadir persona, validación, campos vacíos.

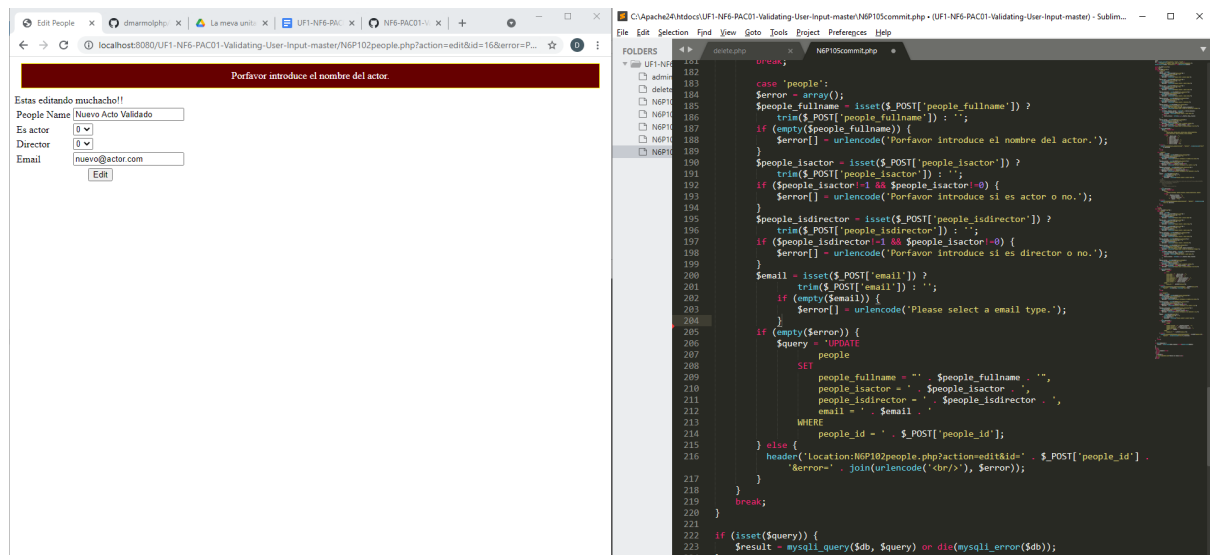

The screenshot shows a web application interface for adding a person. The form has fields for 'People Name', 'Es actor' (radio buttons), 'Director' (radio buttons), and 'Email'. A red error message is displayed: 'Porfavor introduce el nombre del actor. Please select a email type.' Below the form, a PHP script is shown, which handles the form submission and validation. The script checks for required fields and validates the email format. If validation fails, it displays an error message. If validation passes, it inserts the new person into the database.

```
case 'people':
    $error = array();
    $people_fullname = isset($_POST['people_fullname']) ?
        trim($_POST['people_fullname']) : '';
    if (empty($people_fullname)) {
        $error[] = urlencode('Porfavor introduce el nombre del actor.');
```

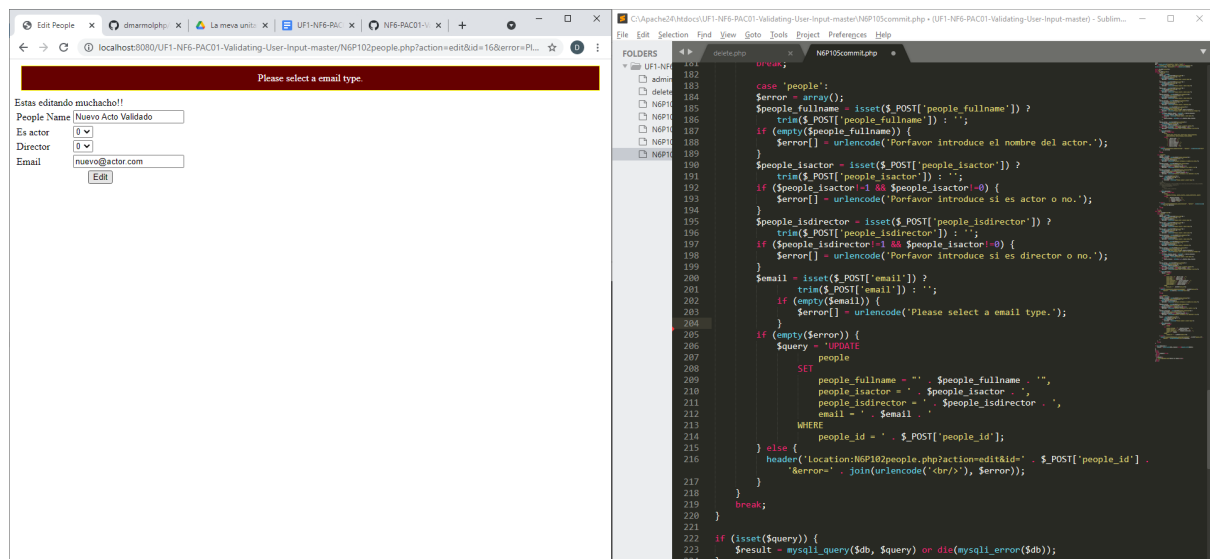

Añadir persona nueva correcto.

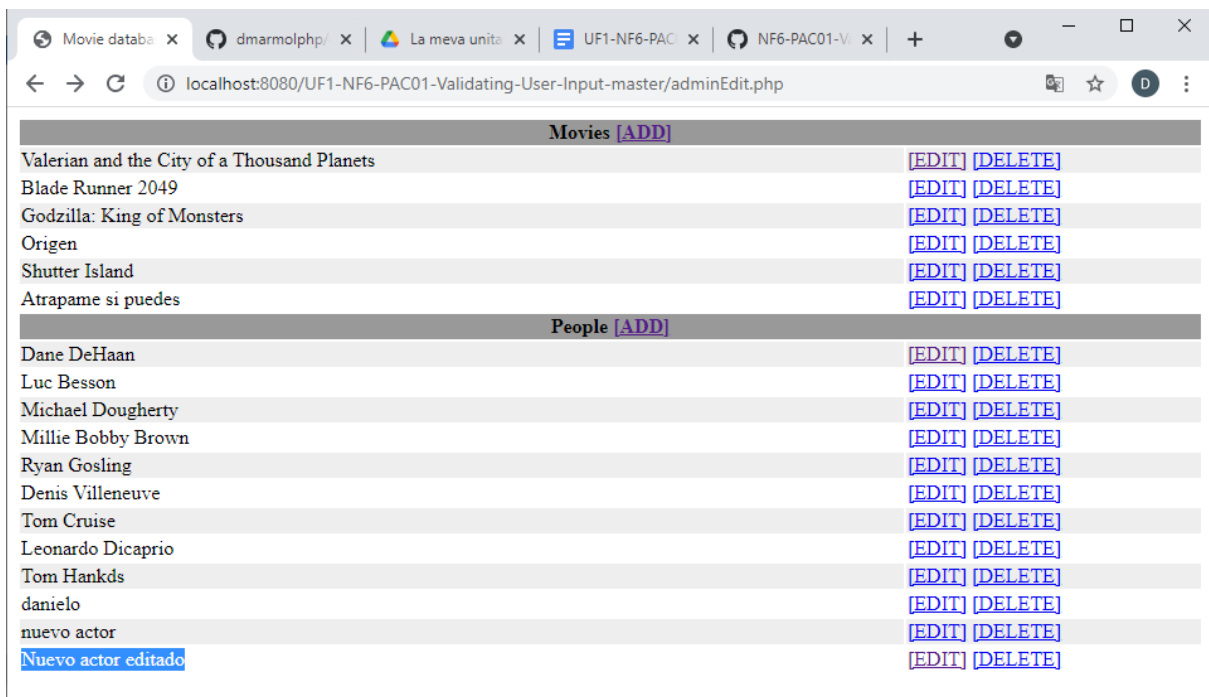

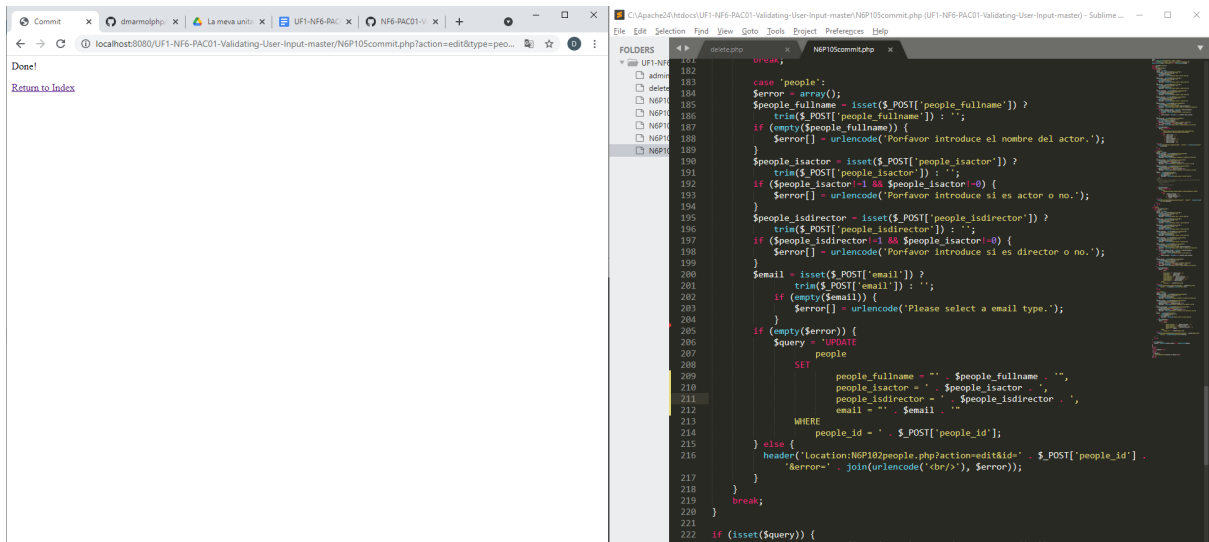

Editar Actor. No añadimos campo de nombre.

No añadimos email.

Editamos correctamente el actor
